

**ADVANCED TOPICS IN CELL BIOLOGY**  
**MCB6772 Section 2E39, Spring – 2023**  
**1 credit**

**Time: Tuesdays and Thursdays; 8:00 AM to 10:00 AM EST**  
**(In-person meetings in MCS room 1044)**

**Instructors:** Peter Kima (pkima@ufl.edu) & Zhonglin Mou (zhlmou@ufl.edu)

**Course Description:** Specific topics about cell structure and function published in recent journal articles with microbiological interest animal and plant systems will be studied. The specific topic for this semester will be cell-surface receptors. We will discuss how cell surface receptors were discovered and how they are involved in transferring extracellular signals. The role of cell surface receptors in host-microbe interactions will be the focus of this semester.

**Course Objectives:**

- To develop an understanding of current advances and approaches in the study of the cell biology of eukaryotes.
- To gain insight on differences between plants and animals pertaining particularly to their susceptibility or capacity to resist or to be exploited by microbial pathogens.

**Student Responsibilities:**

You are expected to read the research papers and upload questions and/or comments under Assignments in Canvas (do not send to the instructor) for each class. At least 3 questions or comments on each paper are required. You are encouraged to watch the videos of the in-person class discussion, which will discuss the review and research articles. The links to the videos will be posted in Canvas. You can also attend the in-person class if possible.

There will be one quiz on each article (8 in total) and quiz questions will be extracted from the assigned research articles.

A written paper of 1-2 pages (11 point) will be expected from each student no more than 1 week after the end of the course. The paper will be in response to questions that will be made available before the end of the course. You will also be expected to prepare about 20 Powerpoint slides for a 30-min presentation on an animal paper or a plant paper you will learn in the course.

**Student Evaluation:**

Quizzes will be worth 40% of grade; final paper will be worth 30% of grade; participation (submission of questions and/or comments) will be worth 10% of grade; Powerpoint presentation will be worth 20% of the grade.

Final grades will be based on the following performance standard (100 points total):

92 - 100 %	=	<b>A</b>
85 - 91.9 %	=	<b>B+</b>
80 - 84.9 %	=	<b>B</b>
75 - 79.9 %	=	<b>C+</b>
70 - 74.9 %	=	<b>C</b>
60 - 69.9 %	=	<b>D</b>
Less than 60 %	=	<b>E</b>

## Course Schedule:

(Quiz questions will be from the papers **highlighted in bold**)

<p>2/7                      Topic: <i>Introduction to the course &amp; cell surface receptors in animal immunity and pathogenesis I</i>                      Presenters:                      Articles:                      1.
